

## Water Conservation

Water conservation is important in Borrego Springs. It is important to conserve water because most of Borrego's water comes from wells.

Since lots of water is used in Borrego, especially in summer, and there is little or no rainfall in a year, the wells are drying. We need to conserve our water because we are far away from any other sources of water. If our water ran out it would cost too much to pipe it in from some where else.

Since we cannot get water from other sources, I think we to try some ways to conserve water. First of all, the Water District should limit the amount of water that golf courses and ranches use. The Water District should do this because they are the ones who use most of the water. Another thing they could do is limit everyone's use of water during summer. I think this would be good because that's the time of year when most of the water is used for pools and other things.

I think that water conservation is important. If we do not conserve what we have left the consequences could be bad. Our town of Borrego Springs is nothing without water.
